

AIR MINISTRY.

A.M. PAMPHLET 62,

7th Edition,

March, 1939.

CONDITIONS OF ENTRY
AND SERVICE IN THE
PILOT SECTION
OF THE
ROYAL AIR FORCE
VOLUNTEER RESERVE

1939

R.A.F. VOLUNTEER RESERVE (PILOT SECTION)
Notes for the information of candidates

1. Reserves for the Royal Air Force are derived from two sources, firstly from officers and airmen who have had service with the regular Air Force, and secondly from men in civil life who are prepared to devote part of their leisure to the task of making themselves efficient for service in emergency.

2. The R.A.F. Volunteer Reserve has been created for men in the second category mentioned in the preceding paragraph, and this pamphlet sets out briefly the conditions of entry and training of Volunteer Reservists as pilots. Later, it is contemplated to widen the field of recruitment to include other types of employment, and details of such developments will be announced from time to time.

3. The paragraphs which follow are subject in all respects to the detailed regulations which have been, or may be, issued from time to time by the Air Council. It must be clearly understood that while every consideration will be given to the reasonable and legitimate interests of individuals, it will be competent for the Air Council at any time to modify the regulations governing the enrolments of the Volunteer Reserve, and no Volunteer Reservist will be entitled to claim any pay, gratuity or other advantage conferred by any provision therein in the event of such provision being at any time added to, varied or canceled.

CONDITIONS OF ENTRY AND SERVICE

4. Age limits

Candidates must have attained the age of 18 on the date on which the application is received, but must not at that date have attained the age of 25. Special consideration may however be given to candidates with special qualifications [such as the holders of the civil pilot's "B" Licence] who have passed the age of 25.

5. Nationality

All candidates must be British subjects of pure European descent. They must also be the sons of parents both of whom are (or, if deceased, were at the time of death) British subjects or naturalized British subjects; a departure from this rule will only be made on the authority of the Secretary of State

for Air. Candidates who possess foreign as well as British nationality may in certain cases be regarded as ineligible for entry. Where there is doubt of nationality or descent, the burden of proof will rest upon the candidate.

6. Education

Candidates should have had a good public or secondary school education which should be approximately up to the standard required for the school certificate of the Oxford and Cambridge Schools Examination Board.

7. Flying experience

No previous flying experience is necessary.

8. Classes ineligible

(a) Registered medical practitioners, medical students, dental surgeons, dental students and members of police forces, prison services and fire brigades are not eligible for entry into the Volunteer Reserve as pilots.

(b) Candidates who are unable to give a reasonable assurance that they will be resident in the United Kingdom for a period of five years will not normally be selected. Obstacles are not however placed in the way of Volunteer Reservists who apply for permission to proceed abroad for short periods which do not interfere with their training.

(c) Candidates who are serving in any branch of H.M. Forces (regular or non-regular) are required to obtain their discharge therefrom before they can be enlisted in the Volunteer Reserve.

(d) It is to be noted that all applications for enlistment are referred for industrial classification in connection with the Schedule of Reserved Occupations and that full consideration can only be given to an applicant's case provided approval for enlistment is given by the Ministry of Labour Officer concerned (see also para. 28).

9. Selection and medical examination

(a) Candidates who, from their application forms, appear to be suitable for entry are invited to appear for interview before a selection board, which is usually held locally. Candidates to whom it is not possible to grant an interview are informed accordingly. No appeal against this decision will be considered, nor will reasons for non-selection be furnished.

(b) Candidates considered eligible by the selection board are required to appear before a medical board; candidates in possession of current "B" Boxes as civil pilots may however be exempted medical examination. Candidates are required to be fit for full flying duties in any part of the world, and are

strongly advised before submitting their applications to consult their medical practitioners as to their physical fitness. The medical standards are described in Appendix I. The fact that a candidate may be considered by his medical adviser to reach these standards does not, however, necessarily ensure his being pronounced fit by the medical board, with whom the final decision rests.

(c) For journeys which can be conveniently undertaken by rail a railway warrant will be provided on application; a candidate who elects to travel otherwise than by warrant may be granted an allowance not exceeding the cost of travel by warrant. In other cases actual reasonable locomotion expenses will be reimbursed. No claim can be entertained in respect of other expenses incurred by candidates in connection with interviews or medical examination.

10. Period of engagement

Volunteer Reservists are attested for a period of five years' service in the first instance, and they may be permitted to re-engage for further periods, each of not more than five years. They will not however be permitted to serve as pilots after reaching the age of 42.

11. Rank

With the exception of candidates who hold certificates of proficiency in respect of service in university air squadrons, who may be appointed to commissioned rank under the provisions of A.M. Pamphlet 68 (obtainable from the Chief Instructions of university air squadrons or from the Under-Secretary of State 57(a), Air Ministry, London, W.C.2), all candidates are entered in the first instance on a common basis as sergeants; in practice they are attested as airmen second class and are promoted to the rank of sergeant on the following day. From time to time a limited number of Volunteer Reservists will be selected for advancement to commissioned rank in the Volunteer Reserve.

12. Liabilities

(a) On enlistment, every Volunteer Reservist accepts the following obligations:—

- (i) To report immediately should he receive a calling up notice or should he see a poster calling out the R.A.F. Reserve (which expression includes the Volunteer Reserve) in a national emergency, and to serve at home or abroad in such an emergency.
- (ii) To attend for training.
- (iii) To keep the Air Officer Commanding, Reserve Command, informed of changes of address.

- (v) Not to leave Great Britain or Northern Ireland without first obtaining written permission from the Air Officer Commanding, Reserve Command.
- (vi) To go into the air whenever ordered to do so.
- (vii) To attend for medical examination when so required.
- (8) Volunteer Reservists when called out for training or in service are subject to the Air Forces Act. At other times they are subject to the Reserve Forces Acts as applied to the Air Force Reserve.
- (c) If at any time when his period of service would normally expire a national emergency exists or appears to be imminent, and he has been called up for air force service, a Volunteer Reservist may be retained for a further period not exceeding 12 months.

13. Service with a foreign power

A Volunteer Reservist may not enter the service of a foreign power during his service in the Volunteer Reserve or for five years after discharge, without the consent of the Air Ministry.

14. Discharge

(a) Candidates for entry into the Volunteer Reserve as pilots must be prepared to serve for the full period for which they engage (see para. 16), and only in very exceptional circumstances are they granted premature discharge from their engagement. In the latter event Volunteer Reservists serving on their first period of five years' service are normally required to purchase their discharge at a cost of £30, reducible by £10 for each completed year of satisfactory service. Volunteer Reservists who have completed five years' satisfactory service or who join the regular Air Force or the Auxiliary Air Force as pilots may however be granted a free discharge.

- (8) A Volunteer Reservist may be discharged from the Volunteer Reserve at any time
 - (i) on account of medical unfitness,
 - (ii) on account of unsatisfactory conduct,
 - (iii) if it appears unlikely that he will become efficient in his duties, or
 - (iv) if his services are no longer required.

TRAINING

15. Elementary and Reserve Flying Training Schools

(a) The flying training of Volunteer Reservists is given at selected flying schools operated by firms under contract with the Air Ministry, and the location of such schools will be announced from time to time.

(b) Apart from limitations due to bad weather and limited hours of daylight in the winter months, facilities for flying training at Elementary and Reserve Flying Training Schools are available on week days and evenings and at week-ends throughout the year.

16. Town Centres

Linked with the Elementary and Reserve Flying Training Schools are a number of Town Centres, at which ground instruction is given. The Town Centres are also available for use as recreational and social centres; they are under the direct control of the Air Officer Commanding, Reserve Command.

17. Supervision of training

(a) Instruction at both the Elementary and Reserve Flying Training Schools and Town Centres is given by fully qualified instructors under the general supervision of the Air Officer Commanding, Reserve Command, and his staff.

(8) Volunteer Reservists must from time to time satisfy the examining officer on the staff of the Air Officer Commanding, Reserve Command, as to their progress in both flying and ground instruction.

18. Elementary training

(a) A large part of the elementary flying training consists of dual instruction, and it is therefore necessary for each centre to maintain a time-table for the instruction of individual Volunteer Reservists who are under dual instruction, and for the Volunteer Reservists to adhere strictly to that time-table. Generally speaking they are required to attend Elementary and Reserve Flying Training Schools at alternate week-ends (Saturday afternoons and Sunday) or to give equivalent attendance during the week. They are also required to attend regularly at the Town Centre on certain evenings (usually not more than two) during the week for ground instruction in such subjects as the theory of flight, airmanship, navigation, and aircraft and engine maintenance.

(8) For Volunteer Reservists who are able to spare the time, it may be possible to make arrangements for the elementary training to be given at continuous whole time courses of about 8 weeks' duration at an Elementary and Reserve Flying Training School; the course includes 50 hours' flying instruction and the appropriate ground instruction. Volunteer Reservists who attend this course of training are not required to attend in the same year the 15 days' training referred to in para. 20.

(g) When they have satisfactorily completed the prescribed course of ground instruction and have attained the required standard of proficiency as pilots of elementary type aircraft, Volunteer Reservists become eligible to receive retaining fee (see para. 22).

(d) Volunteer Reservists entered prior to 1st May, 1938, will qualify for the higher rate of pay applicable to sergeants (pilot) (see para. 23) on satisfactory completion of the prescribed course of ground instruction and on reaching the required standard of proficiency as pilots of elementary type aircraft. Volunteer Reservists entered on and after 1st May, 1938, will not be promoted to the rank of sergeant (pilot) until such date as they have qualified for the award of the flying badge.

19. Subsequent training

(a) After completing the elementary training, Volunteer Reservists are required to continue their attendance at the Elementary and Reserve Flying Training Schools and Town Centres at week-ends and in the evening for further instruction. When sufficiently advanced they will continue their training on service type training aircraft.

(b) Subject to the claims of other Volunteer Reservists, and the availability of aircraft, Volunteer Reservists who are not undergoing dual instruction are encouraged to spend as much time as possible in the air; provided that the time is profitably employed.

20. Annual training

In addition to the attendances at week-ends and in the evenings referred to in the preceding paragraphs, all Volunteer Reservists are required to attend for 15 days' continuous training annually. Volunteer Reservists who are able to spare the time may apply for permission to extend this period. The training, which as far as possible is arranged at times convenient to Volunteer Reservists, may take place at the Elementary and Reserve Flying Training School or such other place as may be determined.

21. Discipline

Volunteer Reservists attending at Elementary and Reserve Flying Training Schools or Town Centres for training are required to conform in all respects to the regulations as laid down for the performance of training at such centres.

FINANCIAL PROVISIONS

22. Retaining fee

After they have reached the required standard of proficiency (see para. 18e). Volunteer Reservists become eligible for a

retaining fee of £25 annually, payable at the end of each year of service. A pilot qualifies for his first retaining fee at the end of the year of service in which he completes his elementary training, provided that in that year he has attended for 15 days' continuous training (or has completed the long course of instruction) and has performed at least 20 hours' flying and such ground training as may be prescribed. For subsequent years of retaining fee a pilot is required in each year of service to attend for 15 days' continuous training and to carry out at least 20 hours' flying and such ground training as may be prescribed.

23. Pay and allowances

(a) Subject to the conditions laid down in the regulations, Volunteer Reservists when called up for service or when carrying out authorised continuous training (see paras. 18 (b) and 20) receive pay at R.A.F. rates, which are at present as follows:-

Aircrewman, second class	8s. 6d. a day;
Sergeant under training as pilot	10s. 6d. a day;
Sergeant (pilot)	12s. 6d. a day.

(b) Volunteer Reservists undergoing continuous training at an Elementary and Reserve Flying Training School receive in addition a daily consolidated allowance (at present 6s.). This allowance is intended to cover the cost of obtaining accommodation and messing near the Elementary and Reserve Flying Training School during the period of training, and travelling expenses will only be paid on the basis of one return journey for each period of training.

(c) Family allowance at the rates and under the conditions laid down for airmen of the regular Air Force is paid to married Volunteer Reservists who have reached the age of 26 years, when in receipt of pay and allowances for training.

24. Travelling and other expenses

Provision is made for the reimbursement on the basis of actual and necessary locomotion expenses incurred in connection with attendance for training. An allowance will also be paid towards other out-of-pocket expenses incurred in connection with attendance for casual week-end, etc., training at Elementary and Reserve Flying Training Schools and Town Centres when payment under para. 23 is not admissible.

25. Uniform

Volunteer Reservists receive a free issue of uniform but are not required to wear it whilst attending for training at Elementary and Reserve Flying Training Schools or Town

Centres ; flying kit is kept at the schools and issued on loan as necessary. Volunteer Reservists will however be required to wear uniforms on any occasion on which the training takes place at R.A.F. units.

26. Pensions and gratuities for disability

Pilots of non-commissioned rank who, in time of peace, are invalided from the Volunteer Reserve in consequence of injury or disease directly attributable to the conditions of service may be awarded pensions and gratuities as follows :—

For disabilities resulting from flying accidents

A pension ranging from 10s. a week for a disability assessed at 20 per cent. to £2 8s. 6d. a week for a disability assessed at 100 per cent., with proportionate rates for each intervening 10 per cent. of disablement. For disability of less than 20 per cent., gratuity may be paid at a rate fixed by the Air Ministry.

For disabilities resulting other than from flying accidents

A pension ranging from 6s. 6d. a week for a disability assessed at 20 per cent. to £1 12s. 6d. a week for a disability assessed at 100 per cent., with proportionate rates for each intervening 10 per cent. of disablement. For disability of less than 20 per cent., a gratuity may be paid at a rate fixed by the Air Ministry.

Separate rates of disability pensions are laid down for officers of the Volunteer Reserve.

27. Insurance

(a) Volunteer Reservists are strongly advised to consider whether their individual circumstances or those of any person dependent on them render it desirable that they should effect private insurance to supplement such compensation as may be payable from official sources, or to cover contingencies in which no official compensation is payable at all.

(b) Liability is accepted, subject to the conditions laid down in regulations, in case of disability attributable to the conditions of service. Awards may also be made to widows, children or parents in case of death similarly attributable. No liability would however be accepted in the event of a Volunteer Reservist being killed or injured (for instance) while participating, in a private capacity, in a civilian air display.

(c) Information regarding the facilities offered by different companies for insurance against flying risk may be obtained from the Air Ministry.

28. Applications

Applications for entry into the Volunteer Reserve as pilots should be submitted in accordance with the directions in the note accompanying this pamphlet, on Form 1764, which must be accompanied by the National Service Form of Application (H.D. 60) copies of which may be obtained from any post office, or local office of the Ministry of Labour.

29. Entry into the regular Air Force

Volunteer Reservists are not debarred from consideration for entry into the regular Air Force as pilots provided they satisfy the appropriate regulations for entry. The purpose of the Volunteer Reserve is however to provide a reserve of personnel for employment in times of national crisis, and candidates should be aware that the Volunteer Reserve is not a normal channel for entry into the regular Air Force, nor will service in the Volunteer Reserve necessarily enhance a candidate's prospects of selection for service with the regular Air Force.

Air Ministry,

March, 1939.

APPENDIX I

THE MEDICAL EXAMINATION OF CANDIDATES FOR THE R.A.F. VOLUNTEER RESERVE (PILOT SECTIONS)

1. A candidate for the pilot section of the R.A.F. Volunteer Reserve must be in good mental and bodily health, and free from any physical defect likely to interfere with his functions in aviation and the efficient performance of his duties at home or abroad.

2. The examination will be conducted on the following lines :—

- (i) Interrogatory and psychological examination.
- (ii) Routine medical and surgical examination.
- (iii) Examination of the eyes.
- (iv) Examination of ears, nose and throat.
- (v) Special medical examination in regard to aptitude for flying.

MEDICAL EXAMINATION

3. (i) The candidates must be possessed particularly of sound lungs, heart and nervous system. Evidence of chronic bronchitis, asthma, emphysema, pleuritic or tuberculous lesions absolutely disqualify. The condition resulting from operation for scrofula is not a bar to acceptance, if the lungs are healthy and the vital capacity is satisfactory. Owing to the importance of these organs, they will, in addition to the usual clinical examination, be tested by special tests* employed by the board.

(ii) The urinary system must be healthy, and the urine must be free from abnormal constituents.

(iii) In regard to the circulatory system, valvular or myocardial disease will disqualify a candidate.

SURGICAL EXAMINATION

4. A candidate found to be suffering from a condition which would need resection but which is curable by operation, will be marked unfit, but the board may recommend re-examination after operation. The following conditions require special mention :—

(i) Head injury or concussion.—A history of severe head injury is a bar to acceptance. The degree of severity may be gauged by evidence of a fatal lesion [e.g., altered reflexes, various pareses or palsies], consciousness of a convulsive attack, or the persistence of sequelae such as headache or dizziness, in an otherwise unimpaired, drooping eye, or temporary unconsciousness. Fracture of the skull need not be a bar to acceptance unless there is a history of associated inter-cranial damage, or of depressed fracture or loss of bone. Less severe head injuries need not necessarily entail rejection provided that sequelae did not persist unduly and have been completely absent for the past three months.

(ii) Neck.—Scars, the result of the removal of glands, will not necessarily be considered a cause for rejection, but the time that has elapsed since operation, the question of recurrence, and signs of tuberculosis elsewhere see all points needing consideration.

* Full particulars of these tests are contained in "The Medical Examination for Fitness for Flying" (Air Publication 180) which is on sale at His Majesty's Stationery Office or through any bookseller, price 2s. net.

(iii) Abdominal operations.—The fact of an abdominal operation having been performed will not, in itself, disqualify a candidate, provided that no hernial protrusion or marked weakness of the abdominal wall has resulted. Operations on the stomach and those involving either short-circuiting of the alimentary tract or partial or total excision of any important organ will disqualify.

(iv) A history of tuberculosis disease of joints or bones, recent or remote, will disqualify the candidate.

(v) A dislocated shoulder carriage will prove a permanent disability even after operation. If however, there has been full functional mobility in an injured joint for over two years, in spite of thorough testing by goniom or physical exertion, the candidate may be admitted, provided that the joint is sound at the time of examination. Fluid effusion of a chronic or recurrent type will be regarded as a cause for rejection.

(vi) Surgical adhesions which are the result of developmental defects or disease will be noted. Attention is directed particularly to varicose veins, haemangioma, undescended testis, hernia and goitre. Hernia, undescended testis if in the canal or at the external abdominal ring, goitre, severe varicose veins and severe haemangioma are causes for rejection.

EYES EXAMINATION

5. (i) The examination for determining the visual acuity will be conducted with well-defined standard optotype. The distance of twenty feet will be used when the test types without binocular vision are read. A candidate with 6/12 or better vision in each eye, without the aid of correcting lenses will be accepted provided that the conditions laid down in sub-paras. (iii), (iii), (iv) and (v) are fulfilled.

(ii) The candidate must not possess a manifest hypermetropia exceeding 2.25 D.Sph. when both eyes are uncovered.

(iii) There must be no disease of the eyelids, refractive media or retina which is likely to recur, to progress, to become aggravated by service or in any way to interfere with the satisfactory performance of duty at home or abroad. Fields of vision, as tested by hand movements, must be normal.

(iv) Colour vision must be either (i) normal or (ii) colour defective pale.

(i) Colour normal.—The candidate reads all the Ishihara plates correctly, and it passes on the Edinburgh Green screen.

(ii) Colour defective pale.—The candidate reads correctly certain Ishihara plates. In the first edition published in 1902, these plates are numbered 1, 7, 9, 12 and 13 and in the seventh edition 1, 10, 14, 16, 22, 23 and 24; in other editions plates which correspond in colour content with the above must be used. On the Edinburgh Green lantern he must be normal for all ordinary red and green tests, although he may interpret pale green as white, or orange as yellow.

(v) There must be good fusion and balance of the eye muscles.*

EXAMINATION OF EARS, NOSE AND THROAT

6. In the examination of the ears, nose and throat, it must constantly be borne in mind that symptoms apparently trifling in importance on the ground tend to become considerably aggravated in the air.

* See footnote on page 15.

(i) Hearing.—The hearing in either ear must be acute, equivalent to a forced whisper at 20 feet with either ear or the other being屏ed off. The candidate must be able to tolerate the exercise without anaesthesia during the time the exercise. When it is considered that anaesthesia may bring defective hearing up to standard, the candidate may be temporarily deferred and re-examined at a later date.

(ii) External ear, larynx and nose.—(a) Mental infections and ulcerations, while not permanently disqualifying a candidate, must be satisfactorily cured or removed before acceptance.

(b) A permanent *polyuria* in a candidate without discharge constitutes a disqualification for air work unless from its nature and history the examiner is satisfied that the condition is not likely to prove a disability, and no serious disease is present.

(c) Occlusion of the drain may be passed, provided that the ear is sufficiently strong to withstand the increased atmospheric pressure experienced in flight, so long as the hearing is up to standard and that there is no exudate in the nose, pharynx, or nasopharynx for re-infection of the middle ear, or the production of mastoiditis or chronic rhinitis.

(iii) Middle ear and mastoiditis below.—(a) Mastoid or suppulsive otitis media. If the condition is acute or sub-acute, the candidate may be referred for treatment and subsequently re-examination. Chronic suppulsive otitis media is a cause for rejection, as is also the radical mastoid operation, mastoidectomy or otherwise. A healed operation for acute mastoid suppuration is not a cause for rejection provided that the hearing is up to standard and the tympanic membrane is sound.

(b) Oto-syndrome constitutes a cause for rejection.

(c) Both mastoid sinuses must be patent. Permanent obstruction entails rejection, but cases of temporary obstruction may be passed, or, if considered necessary, deferred for re-examination.

(iv) External ear.—(a) Cochlear apparatus—Nerve deafness (see (ii)) or any other affection of the cochlea or cochlear nerve tract that may not be present.

(b) Vestibular apparatus—Tests* for gauging the vestibular stability are employed by the Board.

7. Nose.—(i) Deviated septum.—If this causes marked nasal obstruction or is associated with frequent colds or headaches, it must be remedied by operation before a candidate is accepted. Slight degrees may be ignored.

(ii) Tumour hyperplasia, associated with definite symptoms or signs, must be removed by adequate treatment before a candidate is accepted.

(iii) Infection of the maxillary sinuses.—Acute infection must be cured before a candidate is accepted. Chronic suppulsive sinusitis is a cause for rejection and must be treated. If the sinuses alone have been affected and a satisfactory operation has been performed, leaving a free opening into the inferior meatus and the candidate is free from signs or symptoms, he may be accepted.

* See footnote on page 12.

(iv) Nasal polypti must be removed and the cause cured before a candidate is accepted.

(v) Acne vulgaris is a cause for disqualification.

8. Mouth.—(a) Carious teeth, gingivitis and pyorrhoea must be successfully treated before acceptance. Dentures do not disqualify, but care must be taken that the plates are well fitting and of a permanent nature.

(b) Enlarged tonsils which produce obstruction, or become repeatedly inflamed or associated with attacks of quinsy, must be enucleated before a candidate is accepted.

(c) Septic tonsils, even small remnants, which are the cause of repeated sore throats or chronic enlargement of the glands of the neck, must be enucleated before acceptance.

(d) Naso-pharynx.—Adenoids, however small in amount, if they cause repeated colds, with acute or sub-acute mastoiditis or catarrhal or suppulsive inflammation of the middle ear, must be removed before a candidate is accepted.

11. Height standard.—For admission to the Royal Air Force there is no maximum height standard. Candidates with a leg length of 29 inches combined with a height of 64 inches will be accepted. A practical test is a service aircraft to ascertain:

(i) that they have an unobstructed view from the cockpit; and
 (ii) that a padded rectangular rod-like bar and braces will be given to all candidates who are found to have a leg length of less than 29 inches and/or a height of less than 64 inches.

This leg length is taken as follows:—

The candidate is seated on the floor, with the sacrum hard up against the wall, the legs fully extended and the bare feet at right angles to the legs. A box or similar object at least 12 inches high is placed on the floor so that the soles of the feet and the box rest simultaneously on one of its vertical surfaces. The distance between the wall and the box is the "leg length."

Air Ministry.

March, 1938.
